

IN THE SPECIFICATION

Please amend the first full paragraph beginning on page 3, line 5 as follows:

--Optionally, the sensing step includes directing a digital camera to at least a portion of the article to form an image thereof and defining a target region of the image for which target region the colour information is to be sampled. In this case the method may further include the step of determining an average of the sensed colour information or a representative colour set, for use in generating the colour definition data file.--
